

THE DOCK

DOCKING STATION

The Dock, Met One Instruments, Inc.'s ALL-NEW docking station is a power and communication accessory for select handheld devices. Compatible with the new generation of MOI handheld particle counters, including the Aerocet 532 and DR-528, The Dock will charge the handheld unit's battery and provide RS-485, Ethernet, and WiFi communication options simultaneously.

Data transfer is faster and easier than ever with this sleek, all-aluminum unit, sure to be a feature on any desk or tabletop. The Dock rapidly charges new generation handheld devices without blocking the large feature display, allowing the user to view readings on-screen from a distance while the instrument is charging. A removable spacer enables the user to dock their handheld without having to remove the rubber boot.
